

Facilities Team Instructional Sheet

Health & Safety

Government guidelines recommend employers consider the specific conditions of individual places of work and comply with all applicable legislation.

Setup

- Assemble boxes and line with a standard trash bag
- Place recycling stations in high-traffic areas, in close proximity to entryways and exits
- Open EcoBreathe as you would a box of tissues and place on top of the recycling stations
- Ideally, pair recycling stations with sanitizer dispensers for users to disinfect hands following mask disposal

Removal

- When full, remove the recycling station liner from the corrugated bin and seal by tying.
- **Place the sealed liner in a designated quarantine location for 72 hours before pickup.**
- Contact 'collection@ecobreathe.com' to schedule a pick-up. Please include your organization's name, address, and the amount of waste.
- The pickup will either be completed by a member of our team or one of our logistics partners, such as FedEx or UPS.
- Masks are then transported to one of our warehouses for processing before being sent to our recycling partners.

Contact

- For further advice or information, please contact: info@frontlinesanitizing.com
- For used mask removal, please contact: collection@ecobreathte.com
